

Patient
Sample Patient, age 9Referred by
[Referring provider]Reason
Reading fatigue, losing place

Summary

Visual acuity and eye health are normal. The patient has convergence insufficiency and an eye-tracking (saccadic) deficit, which fit the reported reading fatigue, skipped lines and headaches with homework. Visual processing is within the expected range.

Key findings

Test	Result	Expected
Near point of convergence	14 cm (receded)	Under 6 cm
Eye tracking (saccades)	Below age level	Age level
Focusing flexibility	Within normal limits	Age level
Visual processing	Within normal limits	Age level
Symptom survey	Symptomatic	Low symptoms

Plan

Office-based vision therapy with home reinforcement, about 18 to 24 weeks, with progress evaluations. Classroom accommodations provided to the family for school.

What this means for your work with the patient

Expect reading endurance to be limited for now: keep sessions short, use a line marker, and avoid copying from a distance. We'll send an update after the progress evaluation.

Every referral gets this: a written report within 7 days and a progress update. Sent only with the family's consent.
