

Passed the eye chart, but still struggling?

An eye chart checks one thing: how clearly your child sees far away. Reading and schoolwork also need the eyes to team, focus and track for 20 minutes at a time. A child can see 20/20 and still find that hard.

Check anything you've noticed

- | | |
|--|---|
| ☐ Loses their place or skips lines when reading | ☐ Uses a finger to keep their place |
| ☐ Headaches or tired eyes after reading or homework | ☐ Rubs eyes, blinks a lot or covers one eye |
| ☐ Tilts their head or holds books very close | ☐ Reads the words but can't tell you what happened |
| ☐ Still reverses letters (b/d, was/saw) after age 7 | ☐ Fine for 10 minutes, then falls apart |
| ☐ Avoids reading; meltdowns over homework | ☐ Clumsy; trouble catching a ball or with stairs |

Checked two or more?

Ask about a functional vision evaluation. It measures eye teaming, focusing, eye tracking and visual processing, the skills a screening doesn't check. Your doctor gets the results, with your permission.
