

# Some behaviors around looking have a visual cause

Children who find it hard to tell us what they see sometimes show it through behavior. A developmental vision exam checks how the eyes aim, focus and work together, with no reading or talking needed.

## Check anything you've noticed

- |                                                                  |                                                                      |
|------------------------------------------------------------------|----------------------------------------------------------------------|
| <input type="checkbox"/> Avoids tabletop or close-up tasks       | <input type="checkbox"/> Looks at things from the side of the eyes   |
| <input type="checkbox"/> Covers or closes one eye                | <input type="checkbox"/> Bothered by bright light or busy spaces     |
| <input type="checkbox"/> Flicks fingers or objects near the eyes | <input type="checkbox"/> Toe walking, or unsure on stairs and curbs  |
| <input type="checkbox"/> Hard to keep eyes on a task or a person | <input type="checkbox"/> Turns or tilts the head to look at things   |
| <input type="checkbox"/> Bumps into things or misjudges distance | <input type="checkbox"/> Hasn't had a full developmental vision exam |

## Checked two or more?

Ask about a developmental vision evaluation. We go at your child's pace, and with your permission we share findings your therapy team can use.
