

Handwriting or coordination stuck? Check the eyes.

The hand can only copy what the eyes send it. When a child's eyes don't aim, focus or judge space reliably, handwriting, copying and coordination can stall even with great therapy.

Check anything you've noticed

- | | |
|---|---|
| ☐ Copying from the board is slow or full of errors | ☐ Writing drifts off the line; spacing is uneven |
| ☐ Writes much better from memory than when copying | ☐ Reverses letters or numbers |
| ☐ Misjudges distance: catching, stairs, curbs | ☐ Bumps into things; seems clumsy |
| ☐ Loses their place on worksheets | ☐ Tires quickly at tabletop work |
| ☐ Tilts head, closes an eye or leans in close | ☐ Busy places or motion make them uneasy |

Checked two or more?

A functional vision evaluation shows whether vision is part of the picture. Your therapist gets the results, with your permission, so therapy can build on them.
