VISION & LEARNING CENTER

FOR FAMILIES
Shared by your child's OT

Vision is a sensory system too.

Your child's OT works on how the body takes in touch, movement and balance. Vision is part of that sensory picture, and it's often the one that hasn't been fully checked. A school screening or routine eye exam looks at how clearly a child sees, not how well the eyes team, focus and track. Tracking is built on solid binocular skills, so when the eyes don't team well, regulation, handwriting and play can take more effort than they should.

Check anything you've noticed

- [ ] Avoids tabletop or close-up tasks
- [ ] Bothered by bright light or cluttered rooms
- [ ] Hard to keep eyes on a task
- [ ] Bumps into things or misjudges distance
- [ ] Turns or tilts the head to look at things
- [ ] Covers or closes one eye
- [ ] Overwhelmed in busy or noisy places
- [ ] Loses their place or skips lines
- [ ] Unsure on stairs, curbs or playground equipment
- [ ] Fidgets or tires quickly at tabletop work

Checked two or more?

Ask about a developmental vision evaluation. We go at your child's pace and work with all ages and abilities. With your permission, we share findings your OT can use.
